

The Flight Physical:

Why we need it: Since space is such a dangerous frontier to explore, all of our astronauts need to meet certain physical requirements. This ensures not only that the trip is safe for you when traveling, but also that you remain safe upon your return and won't experience any complications.

What is it: Components of our space physical include:

- A seated blood pressure of 140/90 or below
- Vision that is 20/20, or can be corrected to 20/20
- Successful atmospheric pressure training
- Successful trip in a reduced gravity aircraft
- A completed FAA Class II medical certification
- Annual tests from an electrocardiogram
- audiometer, blood, and peripheral vision tests
- Explanation of all allergies and other extenuating circumstances

Talk To Us: As always, your health remains our number one priority, so if you have any questions about any of the above requirements, please email us at the email address or leave a message at the phone number listed on our website.

Closing Thoughts: Please note that some of these requirements require annual tests, or need to be renewed with age. Please contact us before attempting to try to submit a previously completed physical examination without renewal.
